Summary

- Vaccinations are continuing 16 and 17 year olds are taking it up
- Cases going up in all nations, particularly high Scotland and NI. Biggest increases in 15-25 year olds but cases in over 60s going up too
- Hospitalisations and deaths going up slowly both have shifted to a younger demographic with differences in vaccination and who is getting infected. But older adults still most at risk.
- We are out of step with international peers when it comes to vaccinating children and mitigations in schools. Hospitalisations in under 18s are (relatively) very high and going up – back near their January peak.
- There is likely to be a significant surge in cases in children on return to school.
- We are approaching autumn with cases and hospitalisations much higher than last year in all nations. Many highly vaccinated countries are struggling with Delta but we are one of the ones with the fewest public health protections.
