INDEPENDENT SAGE
DATA HEADLINES
1 JULY 2022

• We are in the BA.5 wave
• Infections increasing in:
  • all UK nations – Scotland ahead with 1 in 18 testing positive
  • all age groups
• Hospitals
  • increasing hospitalisations
  • increasing numbers of people in hospital and in mechanical ventilation beds
• Data
  • ONS Covid Infection Survey is being reduced
  • Covid dashboard is now being updated weekly rather than daily
  • We are increasingly looking in the rear view mirror to find out what is coming
PEOPLE TESTING POSITIVE
Percent Testing Positive by Nation: 3 Sep 2021 to 25 Jun 2022
(Source: ONS Coronavirus (COVID-19) Infection Survey results)

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Red, amber, or green status*</th>
<th>Confidence level</th>
<th>Assessment and rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overall growth advantage</td>
<td>Red</td>
<td>High</td>
<td>Evidence of a growth advantage compared to BA.2 BA.4 and BA.5 are now likely to be dominant in England. There is now an associated overall increase in coronavirus (COVID-19) incidence. The growth advantage is also evident in multiple other countries, including those with prior BA.2 waves similar to the UK.</td>
</tr>
<tr>
<td>Growth advantage 1: Transmissibility</td>
<td>Insufficient information</td>
<td></td>
<td>There is no direct data on transmissibility and there is no current ability to measure this directly from surveillance data. Based on data reported to VTG, ACE2 binding is increased for BA.4 and BA.5 compared to prior Omicron variants.</td>
</tr>
<tr>
<td>Growth advantage 2: Immune evasion</td>
<td>Red</td>
<td>Moderate</td>
<td>There is evidence of some antigenic change compared to BA.2, based on laboratory data (moderate confidence); insufficient data to assess vaccine effectiveness. BA.4 and BA.5 are most closely related to BA.2. Structural modelling indicates there is likely to be antigenic change compared to BA.1 and BA.2, which may affect the binding of neutralising antibodies. Neuronal data from prior Omicron infections (human or hamster) shows neutralisation of BA.4 is substantially reduced using BA.1 antisera but there is a more moderate drop in neutralisation by BA.2 specific antisera. Sera from triple vaccinees shows similar or lower neutralisation for BA.4 compared to BA.2 or BA.1. Sera from vaccinees with BA.1 or BA.2 breakthrough infections shows better cross reactivity against BA.4, although there is variation in the data. There is evidence from 2 national surveillance studies of ongoing reinfection, including after prior Omicron variant infection. There is insufficient data for a robust assessment of vaccine effectiveness but in population and survey data there were no early indicators of a large change. The current epidemiological data, whilst incomplete, is consistent with the neutralisation findings.</td>
</tr>
<tr>
<td>Infection severity</td>
<td>Low</td>
<td></td>
<td>In vitro data suggests similarity to previous Omicron variants; epidemiological data requires close monitoring. There has been an increase in people admitted to hospital with COVID-19 in England. Whilst this accompanies an increase in incidence generally, early analysis suggests that the infection hospitalisation rate may be increasing from its low base of approximately 0.3% across all age groups. The reason for any observed increase in IHR is unclear. The properties of BA.4 and BA.5 as assessed in vitro are approximately in keeping with those of other Omicron variants, although it is possible, based on preliminary data, that there have been small changes in phenotype compared to BA.2. These require further confirmation and assessment of clinical significance. Countries which have experienced BA.4 and BA.5 waves have not experienced apparent high severity of disease and hospitalisation rates have tended to remain lower than previous waves.</td>

HOSPITAL DATA
Seven Day Hospital Admissions Rate per 100K by Age in England: May 1 2021 – Mar 8 2022
(Source: Covid Daily Update)
Daily Occupied Beds by Primarily and Incidental Covid
(Source: NHS COVID-19 Hospital Activity)

Daily Occupied Mechanically Ventilated Beds for England
May 1 2021 – Jun 28 2022
(Source: Covid Daily Update)
Patients admitted to hospital

Daily and total numbers of COVID-19 patients admitted to hospital. Data are not updated every day by all 4 nations (England, Northern Ireland, Wales and Scotland). Figures are not comparable as Wales includes suspected COVID-19 patients while the other nations include only confirmed cases.
Patients in hospital and in mechanical ventilation beds – whole pandemic
VACCINATION
Percent of Total Population Unvaccinated, First Dose, Second Dose, and Autumn Booster – Latest Data
(Source: Covid Daily Update and Mid-2020 ONS Population Estimates)

- **England (Jun 29)**:
  - Unvaccinated: 20%
  - First Dose: 16%
  - Second Dose: 5%
  - Autumn Booster: 59%

- **Scotland (Jun 26)**:
  - Unvaccinated: 17%
  - First Dose: 12%
  - Second Dose: 5%
  - Autumn Booster: 65%

- **Wales (Jun 22)**:
  - Unvaccinated: 19%
  - First Dose: 12%
  - Second Dose: 5%
  - Autumn Booster: 65%

- **Northern Ireland (Jun 29)**:
  - Unvaccinated: 25%
  - First Dose: 10%
  - Second Dose: 4%
  - Autumn Booster: 61%

Date: 29-Jun-22

How you can continue to keep yourself and your loved ones safe

Vaccines
Get vaccinated to reduce your risk of catching COVID-19 and becoming seriously ill, and to reduce the risk of spreading the virus to others.

Fresh air
Letting fresh air in if meeting indoors, or meeting outside to disperse COVID-19 particles and reduce the risk of spreading the virus.

Face covering
Considerer wearing a face covering in crowded, enclosed spaces.

Stay at home if unwell
Try to stay at home if you are unwell.

Hand washing
Wash your hands regularly to limit the spread of COVID-19.
We are in the BA.5 wave
Infections increasing in:
  • all UK nations – Scotland ahead with 1 in 18 testing positive
  • all age groups
Hospitals
  • increasing hospitalisations
  • increasing numbers of people in hospital and in mechanical ventilation beds
Data
  • ONS Covid Infection Survey is being reduced
  • Covid dashboard is now being updated weekly rather than daily
  • We are increasingly looking in the rear view mirror to find out what is coming
